Hiring Team

[COMPANY]

Dear Hiring Team,

I'm applying for the [ROLE TITLE] position at [COMPANY]. I'm a bilingual English/Spanish hospitality-operations leader turned implementation and AI-workflow specialist, with 15+ years of experience making complex, high-pressure operations understandable and repeatable for teams.

My background matches work that sits between customers, operators, and technology. At Cafe Linger, I led training, purchasing, inventory, vendors, payroll coordination, cost awareness, service readiness, and customer experience. That work required clear onboarding, practical documentation, calm exception handling, and follow-through-exactly the skills that make software implementation and adoption succeed.

My current product work adds technical proof. I shipped Resale Scanner Pro, a public workflow that connects intake, AI-assisted research, decision gates, listing preparation, publishing, and operating records. I also designed Loft OS as a governed AI-workflow case study and built Sous Chef as a public hospitality-domain application. Across all three, I focus on the same question: will a real person understand the workflow, trust it, and know what to do next?

I would welcome the opportunity to help [COMPANY] onboard customers, translate requirements into usable configurations and workflows, train stakeholders, document decisions, and keep implementations moving through clear handoffs. My operating background, bilingual communication, and product-delivery experience would let me contribute with both empathy and execution discipline.

Sincerely,

Angel Vergara

[DATE]

Hiring Team

[COMPANY]

Dear Hiring Team,

I'm applying for the [ROLE TITLE] position at [COMPANY]. I bring 15+ years of hospitality-operations leadership and a current portfolio of shipped product, workflow analysis, and governed AI-systems work. My specialty is finding the handoffs, exceptions, and decision rules hidden inside day-to-day operations, then translating them into clearer requirements, workflows, and reporting systems.

At Cafe Linger, I worked across purchasing, inventory, vendors, payroll coordination, bookkeeping support, staffing, training, cost awareness, and customer experience. I built repeatable routines and used spreadsheets to track inventory, food cost, margin, payroll, and purchasing. That experience taught me to distinguish the process people describe from the process they actually use-and to design improvements that work under pressure.

My public portfolio demonstrates the technical bridge. Resale Scanner Pro is a shipped decision-support workflow spanning structured intake, AI-assisted research, profit modeling, human review, publishing, and operating records. Loft OS explores visible ownership, authorization, evidence, recovery, and closeout. The Office Chef translates restaurant back-office pain points into system requirements for costing, inventory, vendor-price review, and reporting.

I would be excited to bring that operations-to-systems perspective to [COMPANY], supporting process discovery, requirements gathering, analysis, documentation, reporting, and implementation. I'm especially effective when technical and non-technical stakeholders need a shared understanding of what should happen, who owns it, and how success will be measured.

Sincerely,

Angel Vergara

AI WORKFLOW & AUTOMATION

Orlando, Florida · Remote, U.S. · avergara13@me.com · 407-432-6959 · [LinkedIn](#) · [GitHub](#)

[DATE]

Hiring Team

[COMPANY]

Dear Hiring Team,

I'm applying for the [ROLE TITLE] position at [COMPANY]. I'm a bilingual operations leader turned AI-workflow and implementation specialist, with 15+ years of real operating experience and current proof in shipped products, LLM-assisted workflows, and human-controlled automation.

My operating career taught me where automation succeeds or fails: unclear ownership, missing exceptions, weak documentation, poor handoffs, and tools that ignore the person doing the work. I now apply that judgment to workflow architecture, prompt and structured-output design, LLM API integration, review gates, evidence, and recoverable failure paths.

I shipped Resale Scanner Pro, a public AI-assisted product integrating frontend, backend, database, AI, marketplace, and automation services. I designed Loft OS as a case study in scoped, role-separated AI work with human authorization, evidence-backed review, fail-closed controls, recovery, and deterministic closeout. I also built Sous Chef, a public hospitality-domain AI workspace.

I would welcome the opportunity to help [COMPANY] turn ambiguous operating needs into practical AI-assisted systems. I can contribute workflow discovery, implementation support, documentation, product judgment, and a strong bias toward human control, clear adoption paths, and reliable operating outcomes.

Sincerely,

Angel Vergara
