

# Angel Vergara

APPLICATION QUICKSTART · JULY 2026

Orlando, Florida · Remote, U.S. · avergara13@me.com · 407-432-6959 · [LinkedIn](#) · [GitHub](#)

---

## Fastest credible lane

Bilingual hospitality-technology onboarding and SaaS implementation-roles where operator empathy, customer training, workflow discovery, and reliable handoffs matter more than traditional software-engineering tenure.

## USE THE RIGHT RÉSUMÉ

- Implementation & Onboarding - hospitality technology, SaaS onboarding, CMMS, configuration, customer training, and adoption roles.
- Business Systems & Operations Analysis - process, workforce optimization, operations intelligence, reporting, and systems-analysis roles.
- AI Workflow & Automation - AI process, workflow automation, implementation, solutions, and selective integration roles.

## PROOF ORDER

- Lead with Resale Scanner Pro: shipped public product, live workflow, inspectable repository, and real integrations.
- Use Loft OS second for systems architecture: scope, authorization, evidence, recovery, and closeout-without exposing private internals.
- Use Sous Chef as public hospitality-domain application proof; label The Office Chef clearly as concept / in design.

## 15-MINUTE TAILORING ROUTINE

- Choose the résumé lane that matches the posting's first three responsibilities.
- Mirror four to six truthful keywords from the posting in the summary, skills, and cover letter.
- Select one public product and one systems case study that prove the employer's actual problem.
- Replace every bracketed field in the cover letter; confirm company, title, date, recipient, and posting URL.
- Export a clean PDF, verify links, and log the submission and follow-up date in the Notion dashboard.

## CLAIM DISCIPLINE

- Do not imply paid software-engineering employment, commercial customer deployment, unsupported metrics, or private-repository details.
- Present Resale Scanner Pro as shipped public product; Sous Chef as public application; Loft OS as sanitized architecture case study; The Office Chef as concept / in design.
- Lead as an implementation and workflow specialist-not as a traditional software engineer-unless the role explicitly rewards portfolio proof over tenure.
